

Modern Big Data Analysis with SQL

Coursera Specialisation (Offered by Cloudera)

Course-2: Analysing Big Data with SQL

Week-3: Honours

Question-1: You have a file called report.sql with the following query in it:

SELECT * FROM accounting.current WHERE month= '\${var:month}'; Which command will run this query correctly for the month October?

Answer-1: `impala-shell --var month='October' -f report.sql`

Question-2: Which will properly use either Beeline or Impala Shell to run a file of SQL commands from within a shell script?

Answer-2: `$ beeline -u jdbc:hive2://localhost:10000 -f filename`

`$ impala-shell -f filename`
